PROFESSIONAL SUMMARY

Senior Full Stack Developer with 13 years of experience building enterprise web applications across banking, software factories and internal products. Front-end specialist in React.js and Angular (including microfrontend architectures with Module Federation), and back-end developer in C#/.NET, Java and Node.js, with microservices architectures deployed on AWS (ECS, EKS, Lambda, S3, SQS, API Gateway) and experience in monolith-to-microservices migrations. Used to working in agile teams under Scrum, I have contributed to critical customer-facing modules in the financial sector (credit card installment deferral and retention), applying secure authentication (Auth0, JWT), automated testing (Jest, Vitest, JUnit) and code quality with SonarCloud in regulated environments. I integrate AI tools (Cursor, GitHub Copilot, Claude) into the team's development workflow to accelerate delivery while maintaining quality and compliance standards.

CORE SKILLS

Front-end: React.js, Angular, TypeScript, JavaScript (ES6+), HTML5, CSS3, Zustand, Formik, Microfrontends (Module Federation)

Back-end: C# (.NET / .NET Core), Java, Node.js, RESTful APIs, Worker Services, Microservices

Cloud & DevOps: AWS (ECS, EKS, Lambda, S3, SQS, API Gateway, EC2, RDS), Azure (Functions, Logic Apps, App Services, Service Bus Topics), Git, GitHub, CI/CD

Databases: SQL Server, MySQL, PostgreSQL, MongoDB — stored procedures, query optimization

Quality & Security: Jest, Vitest, JUnit, SonarCloud, code review, Auth0, JWT, OAuth 2.0

AI-assisted development: Cursor, GitHub Copilot, Claude — code generation, testing and assisted review

Methodologies & collaboration: Scrum, Agile, teamwork, peer code review, mentoring, OOP, SOLID principles, design patterns

PROFESSIONAL EXPERIENCE

Senior Full Stack Developer | Connect — Bogotá | Mar 2025 – Present

Stack: C#, .NET, React.js, Formik, Azure, AWS, SQL Server, MongoDB, Jest, Vitest, GitHub, Cursor, GitHub Copilot, Claude

- As part of the development team, I contribute to vehicle insurance policy management software with full traceability of each policy's rules, supporting its migration from a monolith to a microservices architecture to modernize the platform without disrupting operations.
- I build end-to-end solutions (React.js + RESTful C# APIs) within a Scrum team, delivering user stories in sprints and taking part in the team ceremonies (planning, daily, review and retrospective).
- I champion the adoption of AI tools (Cursor, GitHub Copilot and Claude) in the team workflow —code generation, unit testing and review— accelerating delivery without sacrificing the agreed quality standards.
- I design RESTful services in C# with Auth0 and JWT authentication, aligned with the corporate security policies defined together with the team and the security areas.
- I work with Azure services (Functions, Logic Apps, App Services and Service Bus Topics) for the deployment and integration of .NET applications, complementing the team experience on AWS.
- I model databases in SQL Server and MongoDB and uphold the team quality through unit testing (Jest/Vitest) and peer pull request reviews on GitHub.

Full Stack Developer | Banco de Bogotá — Bogotá | Mar 2022 – Jan 2025

Stack: Java, Node.js, Angular (Module Federation), React.js, Zustand, AWS (ECS, EKS, Lambda, SQS, API Gateway, S3), MySQL, PostgreSQL, SonarCloud, JUnit, Jest

- I was part of the team that built the credit card installment deferral module, used by thousands of the bank's customers, contributing to the feature that lets them defer their installments on their own from the mobile app (via integration) and from a web module exposed to external customers, under the bank-defined security.

- Within the team, I contributed to the credit card customer retention module integrated with the institution's offer systems, connecting customers with bank-defined offers to reduce product cancellation.
- Together with the team, I implemented a microfrontend (MFE) architecture in Angular with Module Federation for an internal banking application, enabling modules to be developed and deployed independently and scaling work across multiple teams.
- I developed microservices on AWS (ECS, EKS, Lambda, SQS, API Gateway, S3) alongside the team, to improve and automate the bank internal processes in a scalable, highly available architecture.
- I developed RESTful APIs in Java and Node.js with Auth0/JWT authentication, complying with the financial sector compliance policies.
- I worked under Scrum, taking part in the team ceremonies, and integrated SonarCloud as a quality gate in the CI/CD pipeline with JUnit (back-end) and Jest (front-end) to reduce technical debt before each deployment.
- I championed the use of AI assistants (GitHub Copilot, Claude, Cursor) within the team to speed up development and test writing in a regulated banking environment, validating the generated code against compliance standards.

Full Stack Developer | Zenderbox — Bogotá | Dec 2017 – Mar 2022

Stack: C#, .NET Core, Java, Angular, React.js, AWS (EC2, RDS, S3), SQL Server

- I developed and maintained internal applications for over 4 years alongside the development team, evolving features from user stories with continuous production support.
- I designed APIs in C# and Java with Auth0/JWT authentication, built React.js and Angular interfaces focused on usability and performance, and developed background services with Worker Services in .NET Core 3.0 for long-running processes.
- I deployed solutions on AWS: .NET applications on EC2 (Windows Server/IIS) with RDS (SQL Server), and Java applications with EC2 and static assets on S3.

Full Stack Developer | Control Box Corp — Bogotá | Sep 2016 – Dec 2017

Stack: C#, .NET Core, Visual Basic, Angular, SQL Server

- I integrated the company software with external client applications through RESTful services in C#/.NET Core with JWT authentication.
- I built Windows Services in .NET for business-critical automated processes.
- I managed SQL Server: stored procedures, functions, triggers and query optimization.

Full Stack Developer | CG Software Factory Ltda — Bogotá | Feb 2013 – Sep 2016

Stack: C#, Visual Basic, ASP Classic, AngularJS, SQL Server

- I automated internal processes for corporate clients by building features from user stories, contributing to their operational efficiency.
- I maintained and evolved a legacy ASP Classic application by integrating new business requirements, and developed RESTful services in C# with JWT.
- I managed SQL Server databases with maintenance, performance tuning and optimized queries.

EDUCATION

Systems Engineering — Unipanamericana Compensar, Bogotá (2020)

Associate Degree in Information Systems Design and Development — Unipanamericana Compensar (2019)

Technical Degree in Database Analysis and Design — Unipanamericana Compensar (2017)

LANGUAGES

Spanish: native **English:** intermediate (B1) — fluent technical reading, actively improving
